Engine Calibration Software Improves Fuel Economy on Ford Transit

GreenTransitNews | February 19, 2015

Derive, a company that customizes the software of a fleet vehicle's engine to save fuel, eliminate speeding and reduce emissions, has announced that its engine calibration software now works with the 2015 Ford Transit 3.7L and 3.5L. The Derive system is designed to allow commercial fleets, using the top-selling Ford Transit full-size van, to maximize [...]

Improve customer service **WITH GPS TRACKING**

Discover how GPS tracking provides the tools and data you need to deliver faster, better service in Networkfleet's new Customer Service eBook.

download now

When considering the many advantages of wireless fleet management, don't overlook the opportunity to use the technology to ramp up one of the most important components of your business – customer service. GPS tracking provides the tools and data you need to deliver faster, better service, regardless of the product you sell or the work you do for customers or constituents.

Whether you're a small-to-medium size private company, large public enterprise, public utility or government agency, a telematics solution can help you:

- Improve on-time arrivals and response times
- Improve customer relations by verifying time spent on each job
- Protect your company's public image and brand by improving driver behavior on the road
- Build your reputation as a reliable service provider or vendor
- Create a competitive advantage through superior customer service

To learn more about how to provide the best service to your customers, download Networkfleet's free ebook - [Use GPS Tracking to Dazzle Your Customers with Great Customer Service.](#)
